Work Experience

Senior Software Engineer in Test & QA Tech Lead at Inbox Health

October 2024 - June 2026

- Appointed Tech Lead of newly formed QA team; mentored remote engineers on Cypress and RSpec best practices, established standup and regression review cadence, improved test velocity and consistency
- Grew Cypress E2E test suite by 300%+, expanding coverage across daily test runs and significantly increasing confidence in release quality
- Led architecture investigation and initial implementation of Ember.js upgrade from v1.0 to v3.28 — spanning 7 major versions — including refactored frontend architecture, Rails API integration, and modernized testing library
- Raised Cypress E2E test pass rate from 35% to 90%+ by systematically eliminating flakiness, stubbing database interactions with fixture data, and adding targeted regression and smoke tests across critical user flows
- Advocated for web accessibility standards through regular internal talks, driving adoption of WCAG implementation practices across engineering
- Built ClickUp dashboards that surfaced QA output, test coverage, and testing ROI metrics, increasing leadership visibility into quality initiatives and team impact.

Senior Front-end/Back-end Engineer at AgileSix

November 2021 - September 2024

- Eliminated client-side security risks and enhanced data integrity for veteran debt management forms by successfully migrating validation logic from React state management to Ruby on Rails models.
- Optimized production reliability and test coverage across a complex, legacy codebase by refactoring a multi-framework static build (Drupal, MetalSmith, TypeScript, React), significantly reducing deployment friction and cutting build times by 45%.
- Accelerated feature delivery and ensured seamless data synchronization by integrating robust React components with Rails API data for critical, high-traffic veteran services.
- Secured the reliability of publicly accessed veteran facility data by extending Rails API endpoints to support Next.js pages, including comprehensive data tracking and automated test coverage.
- Guaranteed full legal compliance and digital inclusivity for interactive museum exhibits by implementing strict WCAG 2.1 web accessibility standards, including keyboard navigation and screen reader support.

Summary

Senior Full-stack Engineer and Tech Lead with 10+ years of experience building scalable web applications using JavaScript, TypeScript, React, and Ruby on Rails. Proven track record of leading modernization initiatives, delivering resilient frontend and backend systems, and improving software quality through automated testing and best practices. Expertise in software architecture, web accessibility (WCAG), cross-functional technical leadership, and building reliable products that scale.

Skills

Languages: HTML5, CSS3, JavaScript, TypeScript, Ruby, Python, MySQL

Frameworks: React, GraphQL, Node, Ruby on Rails, Ember, Next.js, Angular

Tools: Claude, CoPilot, Agentic AI Development, AWS, Redis, Sidekiq, Sass, aXe

Workflows: CI/CD, TDD, Agile, Scrum, Git, JIRA

Testing: Cypress, RSpec, QUnit, Selenium, Capybara

Standards: WCAG 2.1 & 2.2

Front-end Engineer at SeeClickFix/CivicPlus

February 2017 - November 2021

- Streamlined full-stack development across React, GraphQL, Ember, TypeScript, and Rails by establishing a new pattern library and design system, reducing inconsistency and accelerating feature delivery
- Modernized citizen request portal with a responsive, accessible Ember and React front-end, ensuring compatibility with updated API features and improving usability for public-facing users
- Expanded Rails API to support multiple new datasets and features for client requests and work orders, increasing platform capability for municipal clients
- Rebuilt company marketing site in WordPress to support new product launches and improve presentation to prospective clients

Interactive Developer at Alden Image

May 2015 - February 2017

- Built reusable component libraries and design systems in Angular, Sass, and jQuery for clients' internal communications, improving development consistency and maintainability
- Informed client web campaign strategy through Google Analytics reporting, identifying optimization opportunities that shaped content and UX decisions
- Designed and delivered custom WordPress websites for multiple clients, driving improved marketing reach through analytics-informed continuous updates

Notable Projects

The Searchable Museum

National Museum of African American History and Culture

- Built and refined the museum's digital exhibit experience using Gatsby, including an in-depth interactive exhibit component and refactored main navigation.
- Audited and resolved accessibility bugs to advance WCAG 2.1 compliance across the site.

VA Facility Pages

U.S. Department of Veterans Affairs

- Implemented VA Design System components and built out the VA/Tricare facility and healthcare pages in Drupal, React, web components, and MetalSmith, ensuring veterans can find accurate, accessible health facility information.
- All pages built to responsive and WCAG accessibility standards.

SeeClickFix Citizen Request Portal

SeeClickFix/CivicPlus

- Designed and built the pattern library and design system underpinning the full citizen request portal from scratch, integrated across Ember, React, and Ruby on Rails.
- Portal enables citizens to submit, track, and explore government service requests with full WCAG 2.1 compliance.

Education

Syracuse University

September 2011 - May 2015

Bachelor of Science

Newspaper and Online Journalism

Minor

Information Technology
